

Great design. From a small country.

## Swiss Design – at Home in the World

Switzerland, a small country in the midst of Europe, is a truly great nation as to architecture and design. Swiss innovation, an extremely high standard of quality, absolute reliability, and traditional elegance enjoy global acclaim and also characterize swiss e-form. Many of the products were awarded international prizes and included in museum collections. The planters and objects of swiss e-form are used in almost all outdoor and indoor environments. Last but not least: all products are hand-made from fibre cement, a classic material, and exclusively manufactured in Switzerland.

It's a wonderful world – designed by

▲ The home of swiss e-form: Glarus in Switzerland with the Tödi Mountain (3614 m.a.s.l.) Model "Geisha" in the garden of a private house in Sydney. ▼

Typically swiss e-form: a fascinating design, unusual colours, and frost resistant to booth. You will love it. Your plants, too.

Public spaces – a special challenge for architects and planners. Swiss e-form is used worldwide.

From classical to avant-garde design: swiss e-form also is at home in indoor areas.

Design and variety: Softline, the swiss e-form collection.

All planters are also available in colour.

**Standard swiss e-form in RAL colours.**

\*These planters have an overflow and water reservoir to ensure an optimum water supply.

## Customline. Your planter made to measure.

**Customline** The ideal program if you seek individual solutions. With Customline slabs made of Eterplan, planters may, thanks to their great flexibility, be made in all sizes and shapes. To do so, you may use the entire swiss e-form RAL colour coding. Customline planters from a certain size are also suitable for small trees.

**Customline is also available in these swiss e-form RAL colours.**

## Hand-made of natural raw materials.

**Swiss made** All of the planters and designer pieces in this brochure were exclusively manufactured in Switzerland, either at the Payerne (VD) plant or in Niederurnen (GL), where the Eternit (Schweiz) AG headquarters are located. Also, the raw materials, which are used to make fibre cement, largely originate in Switzerland.

**Hand-made** Each planter and each designer piece by Eternit (Schweiz) AG is hand-made. On the inside of each new pot, you will find a label with the signature of the craftsman who made it.

**The material** Fibre cement is made of the natural materials cement, powdered lime stone, fibers, air, and water, and has been completely free of asbestos for about 30 years. Plants love this natural, breathable material, which regulates moisture. Swiss e-form moreover meets the high requirements of a modern product as to **sustainability** and energy-efficient manufacture. Both the material and the finished product are made to last and **100% recyclable**.

**5-year guarantee against frost damage** Production processes and materials make swiss e-form planters completely resistant to frost. All that is needed is correct handling. Excess water must be able to drain through the openings in the bottom of the pot, because as soon as water freezes, it can cause expansion cracks. Every swiss e-form pot comes with a 5-year guarantee against frost damage from the date of purchase.

## Design made of tradition.

**Design Classic** Eternit (Schweiz) AG has been writing design history since Willy Guhl presented his legendary beach chair more than 60 years ago. The basic material seems destined for creating timeless pieces, which stand out through their combination of form and functionality. Thus the swiss eform pieces produced today are guaranteed to be design classics tomorrow.

**Trendsetter** Fibre cement is a fascinating and inspiring material. Its creative potential has enthralled designers and artists alike. Whether the students of the Ecole cantonale d'art de Lausanne (ECAL) or renowned European designers, time and again these creators and others knock on the door of Eternit (Schweiz) AG and present their convincing ideas. Fantastic swiss eform-pieces emerge from this co-operation, which clearly under-scores that fibre cement is more 'in' than ever.

## Façades, roofs, furniture, objects. All made of fibre cement.

**Façades** made of fibre cement are not just aesthetically pleasing but also functional through their long-lasting durability. The countless formats, forms, and colours inspire individual designs.

**Roof** The range of fibre cement plates for roofs is huge. The material is long-lived and reliable. Through long experience, solutions are technically mature and formally impressive.

**Furniture and accessories** in fibre cement stand out through their clean and timeless designs. The range of design pieces made of fibre cement is greater today than ever before: tables, stools, chairs, shelf systems, sideboards, long chairs, lamps, and more.
